

SyncTask::SyncTask

```
graph LR; SyncTask[SyncTask::SyncTask] --> GetHandle[IDuctteipTask::getHandle]; SyncTask --> GetName[IDuctteipTask::getName]; SyncTask --> GetSyncHandle[IDuctteipTask::getSyncHandle]; GetName --> ToString[to_string];
```

The diagram illustrates the implementation of the `IDuctteipTask` interface by the `SyncTask::SyncTask` class. The `SyncTask::SyncTask` class (represented by a grey box) implements three methods: `getHandle`, `getName`, and `getSyncHandle`. Additionally, the `getName` method is shown to call the `to_string` function.

IDuctteipTask::getHandle

IDuctteipTask::getName

to_string

IDuctteipTask::getSyncHandle
